First Owner

When the first owner(s) obtains a title from a Department of Motor Vehicles as proof of ownership.

New Owner Reported

When a vehicle is sold to a new owner, the Title must be transferred to the new owner(s) at a Department of Motor Vehicles.

Ownership History

CARFAX defines an owner as an individual or business that possesses and uses a vehicle. Not all title transactions represent changes in ownership. To provide estimated number of owners, CARFAX proprietary technology analyzes all the events in a vehicle history. Estimated ownership is available for vehicles manufactured after 1991 and titled solely in the US including Puerto Rico. Dealers sometimes opt to take ownership of a vehicle and are required to in the following states: Maine, Massachusetts, New Jersey, Ohio, Oklahoma, Pennsylvania and South Dakota. Please consider this as you review a vehicle's estimated ownership history.

Title Issued

A state issues a title to provide a vehicle owner with proof of ownership. Each title has a unique number. Each title or registration record on a CARFAX report does not necessarily indicate a change in ownership. In Canada, a registration and bill of sale are used as proof of ownership.

Vehicle Facts: Audi introduces the newly redesigned Q5 for 2013 * Changes for 2013 include the
 addition of E85 flex fuel capability for 2.0T models, electric power steering for improved economy
 and weight savings, and the addition of a static halogen cornering lamp to the adaptive front
 lighting system * The 2013 Audi Q5 brings back the 4-cylinder turbocharged 2.0T model, adds a
 newly-developed supercharged 3.0-liter model and a new Hybrid model * The new Q5 Hybrid
 Quattro, the first hybrid model from Audi, is designed as a highly-efficiently parallel hybrid that uses
 a 266-volt, 72-cell lithium-ion battery * Hybrid models allow the driver to select power from the
 TFSI, electric only, or in hybrid mode * Power for the Q5 Hybrid is supplied by a 2.0-liter TFSI
 gasoline engine producing 211 horsepower as well as an electric motor producing 54 horsepower,
 for a combined system power of 245 horsepower * Audi Q5 2.0T models are powered by a
 turbocharged 2.0-liter in-line 4-cylinder engine rated at 211 HP at 4300 RPM with a torque rating
 of 258 lbs.-ft. at 1500 RPM * Audi Q5 3.0T models are powered by a turbocharged 3.0-liter V6
 engine rated at 200 HP at 4780 RPM with a torque rating of 295 lbs.-ft. at 2150 RPM * *
 REASONS TO BUY: Hybrid models use a combination of power from a 2.0-liter TSFI engine as
 well as an electric motor with a peak output of 54 horsepower * Hybrid models allow operation in
 three driving modes -- gasoline engine only, electric only, or hybrid * The hybrid system can
 recover energy during deceleration, or it can boost output for powerful acceleration when both
 drives work together * TSFI-equipped engines take advantage of significantly higher compression
 ratios and cylinder pressure, thus fully atomizing fuel and optimizing boost response * Audi Fuel
 Stratified Injection direct injection delivers a precise amount of fuel directly into the engine cylinders,
 as opposed to intake runners, which helps ensure a more complete combustion, diminishing waste
 and increasing power for the amount of fuel used * Within the cylinder, the specially designed
 piston heads compress the fuel in a spiral motion to ensure the most efficient combustion possible
 * The Quattro all-wheel drive system is a dynamic hydraulic system that progressively engages
 depending on wheel slippage, thanks to a number of electronic controls * In normal driving
 conditions, Quattro distributes the power between the front and rear axles by sending 85 percent to
 the front wheels and 15 percent to the rear wheels, enhancing the driving dynamics while
 maintaining optimum control -- however, Quattro can shift 100 percent of the power to the rear
 wheels when conditions demand * The S tronic transmission utilizes two clutches that operate
 independently -- one to control the odd gears, one to control the even gears; this allows gears to
 be changed without changing the flow of power from the engine to the transmission; the result is a
 10 percent increase in fuel efficiency *
