## Glossary

[View Full Glossary](#)

### First Owner

When the first owner(s) obtains a title from a Department of Motor Vehicles as proof of ownership.

### Lease

When someone leases a car from a dealer, the dealer actually sells the vehicle to a leasing company. The leasing company then collects payments for the vehicle from the new owner for 24, 36, 48 or more months. A leasing company can be an independent car dealer or a car manufacturer.

### New Owner Reported

When a vehicle is sold to a new owner, the Title must be transferred to the new owner(s) at a Department of Motor Vehicles.

### Ownership History

CARFAX defines an owner as an individual or business that possesses and uses a vehicle. Not all title transactions represent changes in ownership. To provide estimated number of owners, CARFAX proprietary technology analyzes all the events in a vehicle history. Estimated ownership is available for vehicles manufactured after 1991 and titled solely in the US including Puerto Rico. Dealers sometimes opt to take ownership of a vehicle and are required to in the following states: Maine, Massachusetts, New Jersey, Ohio, Oklahoma, Pennsylvania and South Dakota. Please consider this as you review a vehicle's estimated ownership history.

### Repossession

When a repossession occurs a vehicle owner fails to make loan payments, and the financial institution holding the title takes possession of the vehicle.

### Title Issued

A state issues a title to provide a vehicle owner with proof of ownership. Each title has a unique number. Each title or registration record on a CARFAX report does not necessarily indicate a change in ownership. In Canada, a registration and bill of sale are used as proof of ownership.

Vehicle Facts: The Honda Accord returns for 2010 largely unchanged, continuing its tradition of combining power and efficiency \* Standard on all Accord models is Vehicle Stability Assist (Electronic Stability Control), side-curtain airbags, dual-chamber frontal airbags with a passenger-side occupant position detection system, active front seat head restraints and anti-lock brakes \* Honda Accord comes in sedan and coupe body styles \* Honda Accord sedans come in LX, LX-P, EX and EX-L trim variants; Honda Accord coupes come in LX-S, EX and EX-L trim variants \* Accord offers a 2.4-liter DOHC i-VTEC 4-cylinder engine rated at 177 HP at 6500 RPM with a torque rating of 161 lbs.-ft. at 4300 RPM, a 2.4-liter DOHC i-VTEC 4-cylinder engine rated at 190 HP at 7000 RPM with a torque rating of 162 lbs.-ft. at 4400 RPM, or a 3.5-liter SOHC i-VTEC V6 engine rated at 271 HP at 6200 RPM with a torque rating of 251 lbs.-ft at 5000 RPM \* Transmission choices for Accord include a 5-speed manual transmission, a 5-speed automatic transmission or a 6-speed manual transmission, depending on model variant \* \* REASONS TO BUY: Advanced Compatibility Engineering employed in the body design optimizes the vehicles structural ability to disperse crash energy in a frontal collision by making the vehicle more compatible with bumper heights of other vehicles \* Use of high-tensile steel results in the most rigid Accord yet designed, yielding benefits in ride, handling and overall reduction of noise, vibration and harshness \* The slender A-pillars provide a greater field of view without compromising strength \* 4-wheel disc anti-lock brakes help prevent wheel lock-up and sliding in slippery conditions or emergency stops \* Electronic brake distribution sends brake force to the wheels that are most effective in stopping the vehicle, while brake assist detects when maximum brake force is required and applies it to achieve maximum braking force \* Structures in the front of the Accord are designed to absorb energy in the event of a collision with a pedestrian, helping to improve the pedestrian's chances of survival \* Standard Vehicle Stability Assist with Traction Control is an electronic stability control system that works in conjunction with Accord's drive-by-wire throttle and 4-channel ABS systems to enhance controllability while the vehicle is accelerating, braking, cornering or when the driver makes a sudden maneuver by applying brake force to one or more wheels independently while also managing the throttle, ignition and fuel systems to help the vehicle maintain the driver's intended path of travel \* The standard Vehicle Stability Assist system constantly analyzes data from seven sensors that monitor wheel and vehicle speed, steering input, lateral G forces and yaw rate, and compares the driver's control inputs with the vehicle's actual response, determining if the response falls outside of a predetermined range, and intervening with a corrective action \*
